

FIREPLACE ASSEMBLY WITH AROMATHERAPY SYSTEM

ABSTRACT OF THE DISCLOSURE

In one embodiment, a fireplace assembly is provided that includes a firebox partially surrounded by an outer housing and a receptacle carried by the outer housing. The outer housing is spaced apart from the firebox to define an airflow passageway around the firebox. The fireplace assembly further includes an airflow passageway having an inlet and an outlet. The receptacle is positioned above the firebox in fluid communication with the airflow passageway. The receptacle is configured to hold a selected aromatic material that evaporates and mixes with airflow moving through the airflow passageway between the inlet and the outlet when the receptacle is heated by heat from the firebox. It is emphasized that this abstract is provided to comply with the rules requiring an abstract. It is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims (37 C.F.R. 1.72(b)).
